

## Why choose Pino Solutions Easy Switch?

Roadtech Services has chosen, as an independent ADB service partner, to design a solution for venue infrastructure that can no longer postpone the transition to the 'new' use:

- 1- The desire to connect more LED fixtures to the existing dimmer infrastructure.
- 2- The current use of beamers, active speakers and other equipment that need real fixed voltage.

### Reason for development

In recent years, many repairs have been brought into our workshop with specific power circuit problems of devices and amplifiers. This does not only concern older devices, but also newly purchased equipment.

Further investigation revealed that the existing dimmers to which equipment was connected was not suitable or was being used incorrectly. On our website under the FAQ section, the technical aspects of these problems and the Easy Switch solution are discussed.

The Pino Solutions Easy Switch has specifically been designed for ADB dimmers even for older dimmers that exist in many different versions.

Due to huge demand, the range has now also been expanded and is suitable for other brands of dimmers, mobile racks and touring racks.

### Exclusivity

The Easy Switch has been developed by Roadtech Services and JG Electronics. No other company has currently developed a sustainable, fast and safe solution for the specific problems that people now encounter during the transition period from halogen to LED luminaires. In addition, the system is completely autonomous.

Because every dimmer model is different and every venue where the installation is located is unique, every aspect deserves separate attention. That is why we also carry out maintenance and any modifications immediately when an Easy Switch is installed, completely free of charge and included in the installation.

As a manufacturer, we are the only ones who install the Easy Switch, sell it and provide a warranty on our own products. We do not sell to third parties, but directly to the end user. This has several advantages: direct contact with the developer so that feedback and follow-up are done quickly and correctly; possibility for bespoke solutions, and -not unimportant- an interesting price without intermediaries.

The upgrade is also budgetable as maintenance or investment and/or a combination of both.

### Warranty and service

The Pino Solutions Easy Switch ensures that your current dimmer installation can -which is still sufficient at the moment- can continue to provide reliable service for many years to come.

The Easy Switch upgrade comes with a standard two-year warranty instead of the legally stipulated 1 year. Moreover, the guarantee can be extended by means of a service contract.
